

## Digital Engineering Solutions (TCC ProServ)

**Service Introduction:** As of October 2023, 5.3 billion people worldwide use the internet, which is 65.7% of the global population – just because your IT people use the Internet doesn't mean they know how to build in AWS.

TCC's Professional Services help customers accelerate adoption of AWS solutions by accessing and providing AWS's deep experience, proven frameworks, methodologies, and architectural designs.

Our experts can help you design and implement an AWS-based solution that meets your organization's needs. By using Cloud Professional Services, you can save money on the cost of managing your AWS setup.

Organizations are facing an unprecedented challenge to chart a path to the next normal. We believe execution excellence will be key to thriving in the next normal.

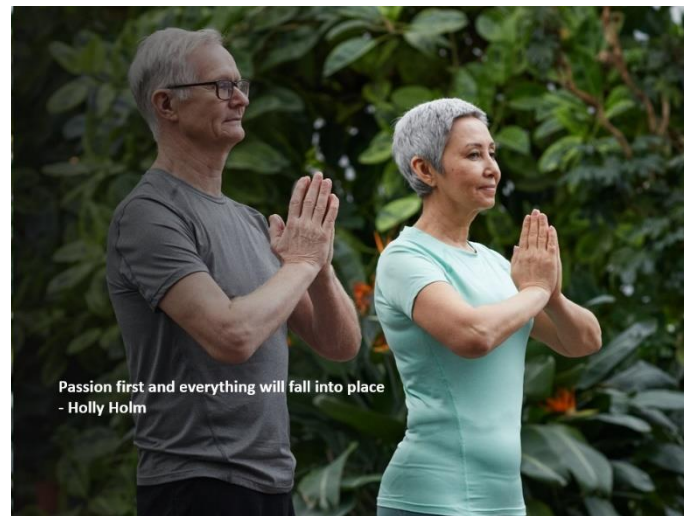

### HighLights:

- Software Engineering - TCC delivers application stack expertise, using our own industry-hardened methodologies.
- An exclusive AWS partner; we leverage all the AWS programs and financial benefits for our customers.
- As the consortium group, TCC has over 300 expert level trained consultants across 4 continents. We can follow the sun at offshore prices.
- TCC helps organizations from project initiation through execution and capability building. Our consultants work hand-in-hand with you to ensure quick ramp ups, on-time delivery, and sustainable change.

**Service Overview:** We are a consortium of resources with deep skills; including application rebuild, repurchase (SaaS), and rehost capabilities. We are

plugged into and can leverage all the AWS programs and financial benefits for the profit of our customers. No one partner or person is an expert in everything AWS, and that's why our goal is to provide a complete experience and resources for a wide array of persistent conditions that plague cloud implementations today.

Bringing our TCC leadership to the effort, we are the single point of orchestration for our customers and our

partners who strive to connect with one another – together, TCC and our partners, we have over 300 engineers, and over 300 AWS certifications.

We help organizations assess their readiness to drive systematic execution and change in transformations using our proprietary methodologies.

We assess across many elements we have found to be essential to sustaining impact in transformation work - this process helps identify gaps in execution capabilities and we then work with organizations to define a tailored roadmap for managing change and sustaining impact.
